Samaritan's Purse Haiti Recruitment Team
Samaritan's Purse – Haiti Country Office
Senior MEAL Officer

August 22, 2026

Dear Hiring Manager,

I am writing to apply for the position of Senior Monitoring, Evaluation, Accountability and Learning Officer at Samaritan's Purse Haiti. I bring more than five years of MEAL experience across three sectors in this country — health at Caris Foundation International, water and sanitation at HANWASH, and education at Anseye Pou Ayiti — combined with the data engineering capability to build and secure the systems those programs run on. I live in Port-au-Prince, I work in French, English, and Haitian Creole every day, and I am available to travel for field visits and verification.

The core of the role, as I read it, is making sure the evidence a Country Office reports is one that holds up when someone traces it back. That is the work I have done. At HANWASH I refined MEAL plans and Indicator Tracking Tables aligned with JMP standards for water and sanitation programs. At Caris Foundation I established and supervised Data Quality Assessment protocols on MySQL-integrated data, following reported figures back to their source records and tracking corrective actions until they were closed rather than merely noted. That habit — verify at the source, close the loop — is what I would bring to the Country Office MEAL framework and to field-verification visits.

I approach data protection as an engineering problem rather than a policy document. Across CommCare, mWater, ODK, and KoboToolbox I have designed collection instruments with skip logic and validation constraints so that errors are caught at entry, and I have administered the databases behind them: role-based access control, secure cloud storage on Azure and AWS, and systematic de-duplication of beneficiary lists. Confidentiality, access control, and retention are decisions made in the schema and the permissions, and I am comfortable making them and documenting them.

On reporting and decision support, I built and maintained program dashboards in Power BI, Quarto, and mWater for weekly indicator monitoring, and automated activity reporting with Python and SQL at Caris Foundation, reducing manual processing time by 40%. As an Applied Economist by training, I can carry an analysis from sampling and disaggregation through to a trend, and — just as important — state plainly to a Program Manager or a Deputy Country Director what the trend means, what is uncertain in it, and what decision it should prompt.

I have supervised field data-collection staff across multi-site programs, provided technical oversight to M&E personnel on collection procedures and data-quality controls, trained field agents on digital tools and dashboards, and coordinated with government counterparts including DINEPA and MSPP. On accountability to affected populations, I would want to build the feedback and complaints mechanism the way I build every other data system: a channel people can actually reach and trust, a confidential record, referral routes that are defined in advance, and tracking through to closure — so that what communities tell us becomes evidence that changes the program rather than correspondence that ends in a folder.

I am drawn to this role because Samaritan's Purse has served Haitian communities continuously since 2010, and because the position treats evidence and accountability as obligations to the people served rather than as reporting overhead. I respect the organization's Christian mission and values and its commitment to serving people affected by crisis, and I would be glad to contribute to a Country Office where that commitment shapes how the work is done. Thank you for considering my application; I would welcome the opportunity to discuss it with you.

Sincerely,

Alexandro Disla
